

Ritter Planetarium: Early November, 2009

Is There Anybody Out There?

November 6 and 13, 2009, Fridays at 7:30 PM

One of the most basic questions ever asked by human beings is: Is there anybody out there? Produced by the Ritter Planetarium staff, this program is about the Search for Extra-Terrestrial Intelligence, or SETI. It looks at how astronomers search for alien civilizations, where they think they might be found, and what they think their odds of success are. *Is There Anybody Out There?* shows that it isn't always the answers that are important in science. What is important is asking the questions.

Our Planet

November 7 and 14, 2009, Saturdays at 1:00 PM

We spend so much time exploring outer space here at the planetarium that it's easy to forget we live on a planet in space, too. *Our Planet* takes a look at the Earth and how it interacts with the Sun and Moon. Along the way, we discover why we have seasons, wind and rain, tides, and the Northern Lights.

All programs will be followed by observing, weather permitting.

Admission: \$6 for adults, \$5 for children and seniors More
information: rpbo.utoledo.edu or (419) 530-2650
