Summer 2013. Exam 2. QQ 1-3

<p>#1. If the electric field is in the positive x direction and has a magnitude given by $E=Cx^2$ where C is a constant, then the electric potential is given by :</p> <ul style="list-style-type: none"> - 2Cx - -2Cx - $Cx^2/3$ - $-Cx^3/3$ - $-3Cx^3$ 	<p>#2. Eight identical spherical raindrops are each at a Potential V, relative to the potential far away. They coalesce to make one spherical raindrop whose potential is</p> <ol style="list-style-type: none"> 1. $V/8$ 2. $V/2$ 3. $2V$ 4. $4V$ 5. $8V$ 	<p>#3. A conducting sphere is charged until the electric potential just outside its surface is V and the field is E. The radius of the sphere is:</p> <ol style="list-style-type: none"> 1. VE 2. $(V/E)^2$ 3. VE^2 4. VE 5. $-V/R$
---	--	---

Summer 2013. Exam 2. QQ 4-6

<p>#4. A capacitor charge Q triples as a result of filling the space between its plates with a dielectric. Choose the correct statement:</p> <ul style="list-style-type: none"> - The capacitor was disconnected from the battery in the process of filling - The capacitor was connected to the battery in the process of filling - The dielectric permittivity of the dielectric is 4 - The capacitor energy decreased - None of the above 	<p>#5. Two protons are fixed 2 mm apart. Another proton is shot from infinity and stops midway between the two. Approximately, what is its initial speed?</p> <ol style="list-style-type: none"> 1. 0 2. 0.6 cm/s 3. 20 m/s 4. 140 km/s 5. 1200000 km/s 	<p>#6. Two capacitors connected in series have the equivalent capacitance of 0.5 mF. However they have the equivalent capacitance of 2 mF when connected in parallel. What are the capacitances of these two capacitors?</p> <ol style="list-style-type: none"> 1. (1F, 1F) 2. (2mF, 2mF) 3. (1mF, 2mF) 4. (1mF, 1mF) 5. (0.5mF, 1mF)
